

To whom it may concern,

We are requesting that our patient receives a formal ophthalmological examination as he/she is contemplating cosmetic eyelid surgery. Specifically, we require that the following be done preoperatively:

1. Visual acuity with and without glasses
2. E.O.M. movement and balance
3. Visual field study if there is any hooding
4. Lower lid tension
5. Slit-lamp examination
6. Clarity of the lens and vitreous
7. Fundus
8. Schirmer test and tear film examination
9. Ptosis evaluation
10. Rule out narrow angle glaucoma
11. Any other exam you feel is indicated

I would greatly appreciate your advising me of the results of your examination and other tests. Please let us know if there are any contraindications or special precautions of which we need to be made aware. Results can be faxed to our office at 504-895-0728.

Thank You,

Christian Jacob, MD/Thomas Moulthrop, MD
